Subject:	RE: Kadrey v. Meta - October 16 Meet and Confer
Date:	Monday, October 21, 2024 12:04:53 AM

CAUTION: External email. Please do not respond to or click on links/attachments unless you recognize the sender.

Counsel:

This email responds to your emails below from Friday and this morning regarding the parties' 10/16 meet and confer, on which the parties discussed Plaintiffs' two 10/9 letters regarding their claimed disputes with Meta's discovery responses.

In this morning's email, you demanded we respond by 9 AM tomorrow to your voluminous set of inquiries and stated that you would be contacting Judge Hixson's chambers "because you did not get back to us on any of the issues despite our request that you do so by Friday." However, we did not agree to provide responses by Friday, but instead told you on our meet and confer that we might not be able to respond until at least Monday. Your Friday email also does not accurately reflect a number of our positions and aspects of the parties' conversation on 10/16, and below we correct the record. We are further troubled by your assertion in this morning's email of additional new issues about which you are demanding our response by tomorrow at 9 AM. This violates both L.R. 37 and Judge Hixson's Discovery Standing Order. We are available to meet and confer with you on the new issues you have raised.

Without waiving any objections and reserving all rights, below is an update regarding the items listed in your Friday email, with corrections to the record as necessary. We have copied the text of your statements from your Friday email below, and we have placed our responses in brackets. Your Friday email divided the issues into two unnamed categories, and for clarity we have renamed the first "Follow-Up Issues" and the second "Potentially Disputed Issues".

I. **"Follow-Up Issues"**

1. RFP No. 64: Meta will consider proposing an agreeable limitation and searching/producing responsive documents.

[Meta response: This request seeks documents showing "each instance within the last three years where You have licensed copyrighted works for Meta's commercial use," without any limitation whatsoever, including any tie to Meta's training of the Meta Language Models. As we discussed on the call, Meta objected to this request 6 months ago and Plaintiffs never raised it since, and it is unduly burdensome and not proportional to the needs of the case. In response to your latest set of RFPs, Meta will be making a production regarding the licensing of copyrighted textual works for Meta's use in training the Meta Language Models, which reflects the scope of potentially relevant materials in this case. We believe that this production will be sufficient and appropriate to respond to RFP No. 64 and the latest requests. We trust that this issue is now resolved.]

2. LibGen Training Data (RFP Nos. 1-3 & 7, ROG No. 1): Meta declined to produce all datasets with copyrighted material that it downloaded but will consider whether it would identify all iterations of downloaded datasets with copyrighted material (including the Bashlykov download of LibGen).

[Meta Response: Since the beginning of this case, Meta has been clear that it would produce the training data alleged to contain the Plaintiffs' works and has done so, along with significant additional training data.   The training data produced by Meta constitutes many terabytes of data, and Plaintiffs' counsel has complained that this volume of data is too large for them to handle. In any event, Meta had understood that the parties had reached a compromise to limit production of datasets to those datasets that are alleged to contain Plaintiffs' works. It is not proportional to the needs of the case, nor pertinent to adjudication of the fair use defense, to produce copies of all pre-training and fine tuning datasets, but Meta is willing to consider producing additional datasets, if any, that contain books. In addition, Meta will confirm whether the Libgen dataset that has been produced is the current and most comprehensive version of that dataset. However, Meta will not identify and produce duplicative copies of each training dataset, which, among other things, would impose a highly disproportionate burden in light of Plaintiffs' needs.]

3. GitHub-Hosted Communications and Source-Code Repositories: Meta will investigate gaps in data (e.g., time periods during which there were no pull requests) as identified in declaration of Joanathan Krein.

[Meta Response: We confirm that we are actively identifying any alleged gaps in the pull requests and will produce any located pull requests for the requested time periods. We are also investigating whether additional source code should be produced in response to Plaintiffs' most recent set of discovery requests (as Plaintiffs' initial requests did not call for source code). We thus trust that this issue is now resolved.]

4. Llama Filters or Training Data (RFP Nos. 45, 64, 74, 76, and 77): Meta will consider providing screenshot(s) of the filtering tool that Meta's counsel described on the call and represented was not collectible.

[Meta Response: None of the cited RFPs address any alleged tools for filtering data. Moreover, the "tool" you are referring to is merely a tool used to visualize data. Because (among other things) there is no identified RFP to which this tool would be responsive, we do not agree there is anything else to provide in response to this request and we trust that this issue is now resolved.]

5. Valuation and Financials: Meta will confirm the scope of data/documents already searched and produced (and whether the documents pertain to Llama 4—see general impasse regarding Llama 4.)

[Meta Response: Meta has already produced financial-related materials responsive to Plaintiffs' document requests. Meta will be producing additional financial-related documents responsive to Plaintiffs' latest set of RFPs in due course to the extent any such documents exist. Meta has not withheld responsive financial related documents on the basis that they relate only to Llama 4. We thus trust that this issue is now resolved.]

6. Identifying Responsiveness of Document Productions: Meta said it'll consider including in its

document production letters an indication of the content of the productions and to what RFPs they're responsive.

[Meta Response: We discussed notifying Plaintiffs when a production addresses a production or formatting issue from a prior production. We are not aware of, and you did not provide, any authority supporting an obligation for a party to provide descriptions of the content of its document productions and to tie those productions to specific RFPs. To resolve this issue, going forward we will provide a description of our productions when we make them. We thus trust that this issue is now resolved.]

7. <u>Identification of Search Terms</u>: Meta declined to identify search terms and hit counts unless it was a mutual exchange and said it would get back to us on when it could exchange search terms and hit counts.   Meta said it would identify all non-custodial and custodial sources searched but not all sources with potentially relevant information (see Identification of Search Terms entry under Impasse section).

[Meta Response: As we stated, we are agreeable to engaging with Plaintiffs in a mutual exchange of search terms and hit counts as contemplated by the parties' agreed-upon ESI order. (Doc No. 101, para. 7).   This disclosure would also identify which non-custodial and custodial sources of information that were searched with these terms . We do not believe there are any other types of data sources with potentially relevant information that were not searched for and/or collected from, nor is that required by the ESI order. We trust that this issue is now resolved.]

8. <u>RFP No. 59</u>: Meta said it would consider proposing a limitation or definition for "fictional works."

[Meta Response: We asked Plaintiffs to explain what they mean by documents about the output of "fictional works." We need to understand what Plaintiffs are seeking here in order to be able to respond to this request.]

9. <u>Interrogatory No. 3</u>: Meta agreed to supplement its response.

[Meta Response: Yes, Meta will supplement this response. We trust that this issue is now resolved.]

10. <u>Interrogatory No. 4</u>: Meta said it would consider proposing an agreeable construction of this interrogatory.

[Meta Response: We do not know what you mean by "agreeable construction." We said that we would take another look at the interrogatory and consider supplementation.   We will supplement our response. We trust that this issue is now resolved.]

11. <u>Interrogatory No. 5</u>: Meta said it would investigate Plaintiffs' description of inchoate agreements as negotiations for licenses, deals in process, or deals that fell apart.

[Meta Response: As an initial matter, we do not understand what you mean by "inchoate agreement," as by definition an agreement is something that is not inchoate. In any event, we will search for and produce any documents about the acquisition or licensing of training data in response to more recently served RFPs. We will also supplement our response to this interrogatory accordingly. We trust that this issue is now resolved.]

12. <u>Interrogatory Nos. 13 and 14</u>: Meta agreed to answer the sub-parts in Rog Nos. 13 and 14.

[Meta Response: While we maintain and do not waive any objections to the fact that these interrogatories and others previously served by Plaintiffs contain multiple subparts, Meta will supplement its responses. We trust that this issue is now resolved.]

13. <u>Data Formats</u>: Meta confirmed some garbled chats are from WhatsApp and represented its production of Workplace Chats are in the format available. Meta said it would consider providing file types (but did not agree to re-produce chats in any other formats, see entry in Impasses section).

[Meta Response: We are working to reproduce the discrete number of WhatsApp chats that had a processing issue. With respect to Workplace chats, you have not identified any legitimate issues with the format of those materials. All text is legible, including emojis and links, in the document you cited. To your question, the format in which they were archived, searched, and collected has a file extension of eMail. This reproduction and information about file extension should address any issues that exist re "data format." We trust that this issue is now resolved.]

II. **"Potentially Disputed Issues"**

1. <u>Production of Incorrectly Imaged Documents</u>: Meta said it was aiming for the end of October to re-produce documents incorrectly imaged and/or formatted that Judge Hixson ordered on 10/1 it must produce. Plaintiffs will ask Judge Hixson to impose an earlier deadline given the deposition schedule.

[Meta Response: Meta has already addressed and reproduced 1,335 documents with imaging issues, which is a majority of the documents at issue. There are no more than 1,100 documents remaining with potential imaging issues. We anticipate completing our review and reproduction by no later than the end of the month and will endeavor to do so sooner. We trust that this issue is now resolved.]

2. <u>General Scope of Custodial Files Searched</u>:

Meta declined to search custodial files outside of the 10 custodians it originally selected and the additional five ordered by Judge Hixson. Meta also represented its search for responsive documents was limited to non-custodial sources and custodial sources of only those 10 custodians (and now the additional five). Meta also identified two for which it searched custodial files beyond its initial 10 custodians but declined to identify whether it conducted a similar search for any other requests. This dispute concerns all RFPs, including Communications with Business Partners and Communications with Shadow Libraries.

[Meta Response: In compliance with the parties' agreed-upon ESI Order, Meta conducted a comprehensive search for documents responsive to Plaintiffs' requests and conducted custodial documents for the designated custodians.   The ESI Order limited custodial ESI searches to only 10 custodians, and Judge Hixson's October 4 order added 5 more custodians.   You have identified no authority for your demand that Meta conduct boundless custodial searches beyond the 15 custodians that have already been identified. On our meet and confer, we discussed specific requests regarding, for example, training data discussions with certain companies (RFP 29-34) or archives of

information on the internet (RFP Nos. 7-12). We are willing to conduct some reasonable follow up searches for these discrete categories.]

Meta declined to add any additional custodians identified by Plaintiffs.

[Meta Response: We have already produced documents for the 10 custodians authorized by the ESI order and are in the process of doing so for 5 additional custodians allowed for by Judge Hixson's recent order. Plaintiffs have identified no reason for doubling (and now in your latest email, tripling) the number of custodians this late in the discovery process.   Plaintiffs also have failed to follow the required procedures set forth in the ESI order for seeking additional custodians.]

3. All Llama Models and All Datasets: Meta represented that despite its written objections it has included all Llama models in its document and data searches and productions except as to Llama 4, and it declined to search for and produce responsive information and data in connection with Llama 4. Meta also represented that despite its written objections it has not limited its search for and production of datasets to Book3, but it declined to identify all datasets with copyrighted works that it copied or how many times those datasets, in full or in part, were downloaded. Meta also represented it believed only datasets relating to training was relevant and declined to produce other datasets. This dispute concerns Plaintiffs' RFP Nos. 64, 67, and 49, GitHub-Hosted Communications and Source-Code Repositories, documents and interrogatories related to Valuation and Financials.

[Meta Response: This issue relates to Follow Up Item #2 above, and we refer you to our response above. Meta has stated that it would produce the training data alleged to contain the Plaintiffs' works and has done so.   That training data constitutes multiple terabytes of data, which Plaintiffs' counsel has complained is too large for them to handle. It is not proportional to the needs of the case, nor pertinent to adjudication of the fair use defense, to produce any duplicative copies of enormous data sets. With respect to Llama 4, that model is being developed and not expected to be released until next year, after the close of fact discovery in this case. While we are willing to work with Plaintiff to identify reasonable discovery to address the fair use issues as it relates to Llama 4, we do not think it is proportional to the needs of the case nor practical to comprehensively address another, unreleased and unfinalized model in the short time period the parties have to conduct the remaining discovery.]

4. RFP No. 45: Meta declined to expand its search beyond use of "tools" for identifying licensed material to include documents or materials regarding licensing and communications with book publishers.

[Meta Response: While we maintain our position that there are no "tools" responsive to your request, as discussed above regarding Follow Up Item #1, Meta will be producing documents about acquisition or licensing of training data in response to more recently served RFPs. We consider this issue resolved.]

5. Production of Hyperlinks: Meta declined to make a supplemental production of all hyperlinked documents.

[Meta Response: As the ESI order makes clear, hyperlinked documents are not akin to attachments (ESI Order, Doc. No. 101 at 17).   Meta has been responding to your requests for additional hyperlinked documents; has been producing the hyperlinked documents when they are responsive;

and has noted that in many instances you already had the document you were asking us to produce. We expect to complete our production of any remaining responsive hyperlinked documents that you have requested in about a week. We trust that this issue is now resolved.]

6. <u>Addition of Timothy Dettmers as Custodian</u>: Meta declined to add Mr. Dettmers as a custodian.

[Meta Response: We do not agree that Mr. Dettmers should be added as a custodian. To begin, the ESI order has a protocol for adding custodians and Plaintiffs have not followed that protocol here. Moreover, as we have repeatedly explained, and as Plaintiffs are well aware, Mr. Dettmers was a part-time employee at Meta prior to the company's development of the Llama models and was uninvolved in the development of those models. Mr. Dettmers' documents, including those that Judge Hixson determined were privileged, have no bearing on the issues in dispute. Moreover, you have known about Mr. Dettmers since at least December 2023 and provide no reason why Plaintiffs' suddenly need his ESI now, particularly after Judge Hixson's adjudication of the privilege dispute.]

7. <u>Identification of Repositories Not Searched</u>: Meta declined to identify repositories of potentially relevant documents that were not searched. This dispute is relevant to all of RFP Nos. 1-12 and 36-38.

[Meta Response: We do not understand what you are referring to . Meta searched for and/or collected responsive documents in the data sources within Meta's possession, custody or control that would have potentially responsive or relevant documents, including both non-custodial files and custodial files (see response to Potentially Disputed Issue #2 above). Meta is not aware of any types of data sources with potentially responsive or relevant documents that were not searched. We will provide that information when the parties exchange ESI search terms and hit counts (see Follow Up Issue #7 above).]

8. <u>Identification of Noncustodial and Custodial Sources</u>: Meta declined to identify all sources that potentially might have responsive information even if not searched, and confirmed its investigation of custodial files to search consisted of asking the custodians in a general way what modes of communication they use to communicate about work (without specifically asking about alternative modes like WhatsApp, Discord, Signal, Telegram, etc.). Meta was not able to explain the production of Al-Dahle WhatsApp messages on the night before his deposition.

[Meta Response: Your statements do not reflect what the parties discussed. Meta searched for and/or collected responsive documents in the data sources within Meta's possession, custody or control that would have potentially responsive or relevant documents, including both non-custodial files and custodial files (see response to Potentially Disputed Issue #2 above). For each of the ESI custodians, Meta has made a reasonable inquiry into which modes of communication they use for work, including by asking about particular modes by name.   We will identify the data sources (including communication platforms) that were searched when the parties mutually exchange search terms and hit counts.

9. <u>Searching Manifold, GTT, Hive</u>: Meta generally refused to perform searches in Manifold, GTT or Hive on the purported grounds that purportedly they cannot be searched and, in any event, would only contain duplicative data. Meta agreed to consider identifying (not

producing) the iterations of copies of training datasets with copyrighted material or books within their PCC.

[Meta Response: This item involves storage locations that may include training data, an issue that was previously addressed in Follow Up Item #2 above. Meta has stated that it would produce the training data alleged to contain the Plaintiffs' works and has done so.   That training data constitutes multiple terabytes of data, which Plaintiffs' counsel has complained is too large for them to handle. It is not proportional to the needs of the case, nor pertinent to adjudication of the fair use defense, to produce any duplicative copies of enormous data sets.]

10. RFP No. 54: Meta declined to search for documents on the grounds that the "factual premise" of the RFP is purportedly wrong, even if there had been a decision at one point not to market Llama with a user interface.

[Meta Response: RFP No. 54 asks for documents about a decision "not" to create an interface for users for the Meta Language Models. But Meta did create an interface for users for the Meta Language Models – Meta AI – and Meta has produced documents about that interface. This document request therefore is based on an inaccurate premise and, in light of that inaccuracy, you have not articulated any reason it would be relevant or proportional to Plaintiffs' needs.]

11. Interrogatory No. 15: Meta declined to answer all sub-parts of this interrogatory.

[Meta Response: Reserving all rights and objections, Meta intends to supplement its response to this interrogatory. We trust that this issue is now resolved.]

12. Additional Interrogatories Requested: Meta declined to agree to Plaintiffs' request to expand the numbers of interrogatories the parties may serve and answer the interrogatories Plaintiffs served on October 10.

[Meta Response: Meta is willing to agree to a small increase in the number of interrogatories, up to 5 more than the 25 the parties had previously agreed to, provided the increase is mutual for both sides. We trust with this compromise that this issue is now resolved.]

13. Data Formats: Meta declined to reproduce in a legible format the Workplace Chat and WhatsApp messages that Plaintiffs explained contain garbled text or was not produced in a reasonably usable format.

[Meta Response: This complaint is duplicative of Follow Up Item #13 above. We have addressed these issues there.]

14. Relevant Time Period: Meta declined to extend its searches to the beginning of the class period.

[Meta Response: Since the beginning of discovery in this case, Meta has clearly stated that its collection and production of documents would be based on the January 1, 2022 date that it included in its responses and objections. This is a conservative date because Meta did not even begin work on the Meta Language Models at issue in this case until late 2022. Plaintiffs never raised any issue with this time frame until your October 9 letter. We have no reason to believe that there would be

relevant responsive documents at an earlier date than 2022 regarding the Llama models.

15. Fair Use Interrogatory (No. 1, Set 2): Meta declined to amend its interrogatory to remove its reference to unidentified documents that it contends support its Fair Use defense and to identify the them.

[Meta Response: Your statement does not reflect the parties' discussion. We told you that Meta will supplement its response to this interrogatory, including identifying documents where appropriate. We trust that this issue is now resolved.]

16. Advice of Counsel Interrogatory (No. 2, Set 2): Meta would not agree to amend its response to state without ambiguity and equivocation whether it will or will not rely on an Advice of Counsel defense.

[Meta Response: We said that our response reflected our position and that we would take your issue back to the client. To resolve this issue, Meta will supplement its response in the manner requested. We trust that this issue is now resolved.]

17. Additional 30(b)(6) Topics: Meta decline to state whether it would object to any of the amended 30(b)(6) topics Plaintiffs served on October 8, and if so to meet and confer now and attempt to resolve any such objections, because the response time set forth in the rules has not yet elapsed.

[Meta Response: As we told you, we were evaluating your topics and identifying the witnesses that Meta plans to designate. This must be informed by your list of intended 30(b)(1) deponents, which Plaintiffs provided only on Thursday, October 17th (and subsequently have modified over the weekend). Meta will meet and confer with Plaintiffs' this week about the 30(b)(6) topics and any objections.]

Regards,
Judd

Subject: RE: Kadrey v. Meta - October 16 Meet and Confer
Importance: High

[External]

Good Morning Counsel – Following up on our discovery letters dated 10/8, M&C on 10/16, and the
email we sent on Friday.

A. We will contact Judge Hixson's chambers tomorrow (Monday, 10/21) morning to request a
    telephonic conference with the parties to address the issues that are highlighted yellow in my
    email below, per the standing order. We are proceeding on all outstanding issues because you
    did not get back to us on any of the issues despite our request that you do so by Friday. Please
    let us know by 9 am pacific tomorrow if you do not think that any highlighted issues can be
    resolved by telephonic conference so we can state your position when we request the
    conference.

B. Please also let us know if you will agree to shorten the time for Meta to provide any
    objections to our recent written discovery to 21 days. Plaintiffs likewise would agree to
    provide any objections and responses within 21 days to the discovery you served Friday
    night. If not, that is an additional issue we would like to present to Judge Hixson at the
    conference.

C. In light of Meta's position that it won't be representing former employee Edouard Grave, we
    request that he be added as a document custodian. We also request that Meta add other
    requested deponents as custodians (Yann LeCun, Susan Zhang, Sy Choudhury, Eugene Nho,
    Logan Kerr, Chris Cox, and Thomas Scialom), as well as Manohar Paluri, Jacob Xu, Movarid
    Metanat, Andrew Boswroth, Nisha Deo, Chris Marra, and Lukas Belcher. Please let us know
    if you agree to this request in part or in full (along with our outstanding request identified in
    our M&C correspondence and below to add further document custodians, including other
    requested deponents and former employees like Guillaume Lample and Xavier Martinet).

D. Also in light of Meta's position that it will not be representing former employees Edouard
    Grave, Guillaume Lample, and Xavier Martinet, we will request that Judge Hixson issue an
    order to French authorities authorizing Plaintiffs to obtain documents from, and to depose,
    these witnesses.

Again, please let us know your positions by 9am tomorrow (Monday, 10/21). Thank you.

Best,
Reed

Subject: Kadrey v. Meta - October 16 Meet and Confer

Dear Counsel,

This correspondence memorializes the outcome of the parties' discovery meet and confer on October 16, 2024, to address Plaintiffs' two discovery deficiency letters to Meta dated and served on October 9, 2024.

The issues you stated that Meta would investigate or otherwise look into in the hope of resolving them are as follows:

1. RFP No. 64: Meta will consider proposing an agreeable limitation and searching/producing responsive documents.

2. LibGen Training Data (RFP Nos. 1-3 & 7, ROG No. 1): Meta declined to produce all datasets with copyrighted material that it downloaded but will consider whether it would identify all iterations of downloaded datasets with copyrighted material (including the Bashlykov download of LibGen).

3. GitHub-Hosted Communications and Source-Code Repositories: Meta will investigate gaps in data (e.g., time periods during which there were no pull requests) as identified in declaration of Joanathan Krein.

4. Llama Filters or Training Data (RFP Nos. 45, 64, 74, 76, and 77): Meta will consider providing screenshot(s) of the filtering tool that Meta's counsel described on the call and represented was not collectible.

5. Valuation and Financials: Meta will confirm the scope of data/documents already searched and produced (and whether the documents pertain to Llama 4—see general impasse regarding Llama 4.)

6. Identifying Responsiveness of Document Productions: Meta said it'll consider including in its document production letters an indication of the content of the productions and to what RFPs they're responsive.

7. Identification of Search Terms: Meta declined to identify search terms and hit counts unless it was a mutual exchange and said it would get back to us on when it could exchange search terms and hit counts. Meta said it would identify all non-custodial and custodial sources searched but not all sources with potentially relevant information (see Identification of Search Terms entry under Impasse section).

8. RFP No. 59: Meta said it would consider proposing a limitation or definition for "fictional works."

9. Interrogatory No. 3: Meta agreed to supplement its response.

10. Interrogatory No. 4: Meta said it would consider proposing an agreeable construction of this interrogatory.

11. Interrogatory No. 5: Meta said it would investigate Plaintiffs' description of inchoate agreements as negotiations for licenses, deals in process, or deals that fell apart.

12. Interrogatory Nos. 13 and 14: Meta agreed to answer the sub-parts in Rog Nos. 13 and 14.

13. Data Formats: Meta confirmed some garbled chats are from WhatsApp and represented its production of Workplace Chats are in the format available. Meta said it would consider providing file types (but did not agree to re-produce chats in any other formats, see entry in Impasses section).

We asked Meta to get back to us on these issues by today, October 18, and you said you would attempt to do so.

The issues on which the parties are at an impasse and we will proceed to brief for filing on 10/23 are as follows:

Production of Incorrectly Imaged Documents: Meta said it was aiming for the end of October

1.
    to re-produce documents incorrectly imaged and/or formatted that Judge Hixson ordered on 10/1 it must produce. Plaintiffs will ask Judge Hixson to impose an earlier deadline given the deposition schedule.

2. General Scope of Custodial Files Searched:
    a. Meta declined to search custodial files outside of the 10 custodians it originally selected and the additional five ordered by Judge Hixson. Meta also represented its search for responsive documents was limited to non-custodial sources and custodial sources of only those 10 custodians (and now the additional five). Meta also identified two for which it searched custodial files beyond its initial 10 custodians but declined to identify whether it conducted a similar search for any other requests. This dispute concerns all RFPs, including Communications with Business Partners and Communications with Shadow Libraries.

    b. Meta declined to add any additional custodians identified by Plaintiffs.

3. All Llama Models and All Datasets: Meta represented that despite its written objections it has included all Llama models in its document and data searches and productions except as to Llama 4, and it declined to search for and produce responsive information and data in connection with Llama 4. Meta also represented that despite its written objections it has not limited its search for and production of datasets to Book3, but it declined to identify all datasets with copyrighted works that it copied or how many times those datasets, in full or in part, were downloaded. Meta also represented it believed only datasets relating to training was relevant and declined to produce other datasets. This dispute concerns Plaintiffs' RFP Nos. 64, 67, and 49, GitHub-Hosted Communications and Source-Code Repositories, documents and interrogatories related to Valuation and Financials.

4. RFP No. 45: Meta declined to expand its search beyond use of "tools" for identifying licensed material to include documents or materials regarding licensing and communications with book publishers.

5. Production of Hyperlinks: Meta declined to make a supplemental production of all hyperlinked documents.

6. Addition of Timothy Dettmers as Custodian: Meta declined to add Mr. Dettmers as a custodian.

7. Identification of Repositories Not Searched: Meta declined to identify repositories of potentially relevant documents that were not searched. This dispute is relevant to all of RFP Nos. 1-12 and 36-38.

8. Identification of Noncustodial and Custodial Sources: Meta declined to identify all sources that potentially might have responsive information even if not searched, and confirmed its investigation of custodial files to search consisted of asking the custodians in a general way what modes of communication they use to communicate about work (without specifically asking about alternative modes like WhatsApp, Discord, Signal, Telegram, etc.). Meta was not able to explain the production of Al-Dahle WhatsApp messages on the night before his

deposition.

9. <u>Searching Manifold, GTT, Hive</u>: Meta generally refused to perform searches in Manifold, GTT or Hive on the purported grounds that purportedly they cannot be searched and, in any event, would only contain duplicative data. Meta agreed to consider identifying (not producing) the iterations of copies of training datasets with copyrighted material or books within their PCC.

10. <mark><u>RFP No. 54</u></mark>: Meta declined to search for documents on the grounds that the "factual premise" of the RFP is purportedly wrong, even if there had been a decision at one point not to market Llama with a user interface.

11. <mark><u>Interrogatory No. 15</u></mark>: Meta declined to answer all sub-parts of this interrogatory.

12. <mark><u>Additional Interrogatories Requested</u></mark>: Meta declined to agree to Plaintiffs' request to expand the numbers of interrogatories the parties may serve and answer the interrogatories Plaintiffs served on October 10.

13. <mark><u>Data Formats</u></mark>: Meta declined to reproduce in a legible format the Workplace Chat and WhatsApp messages that Plaintiffs explained contain garbled text or was not produced in a reasonably usable format.

14. <mark><u>Relevant Time Period</u></mark>: Meta declined to extend its searches to the beginning of the class period.

15. <mark><u>Fair Use Interrogatory (No. 1, Set 2)</u></mark>: Meta declined to amend its interrogatory to remove its reference to unidentified documents that it contends support its Fair Use defense and to identify the them.

16. <mark><u>Advice of Counsel Interrogatory (No. 2, Set 2)</u></mark>: Meta would not agree to amend its response to state without ambiguity and equivocation whether it will or will not rely on an Advice of Counsel defense.

17. <mark><u>Additional 30(b)(6) Topics</u></mark>: Meta decline to state whether it would object to any of the amended 30(b)(6) topics Plaintiffs served on October 8, and if so to meet and confer now and attempt to resolve any such objections, because the response time set forth in the rules has not yet elapsed.

Best regards,
Reed
